

PH Setter Operation — Buildout Runbook

Agentic Voice, Inc. — d/b/a MFunding.net | Momentum Funding

Document	PH Setter Operation — Human Buildout Runbook
Audience	Owner (Ernesto) + Developer (Khalil)
Scope	Only the steps machines cannot do — everything automatable is being built by the team
Naming law	Every new asset is prefixed PH . Existing MCA/VCF assets are read-only.
Last updated	July 31, 2026

What this document is

The PH Setter Operation is a **new, parallel outbound line**: two Philippine-based setters dial UCC lists all day, drive every live call to a **complete file** (e-signed application + Plaid bank connect), and hand the record off to the existing business **only** at the "Bank Connected" stage.

Everything a machine *can* do is being built for you right now by automated teammates — the pipeline, the per-stage automations, the packet edge function, the Revenue Playbook, the setter scorecard, and the campaign wiring. **This runbook covers only the steps a machine cannot do**: buying things, clicking inside GHL's API-blocked screens, judging vendor demos, buying data, and hiring/managing people.

Do the steps in order. Each step says **who** does it, **how long**, the **exact clicks**, how to **verify** it worked, and **what it unblocks**.

NAMING LAW (non-negotiable)

Every new asset you create is prefixed **PH**. Never touch, rename, or edit the existing MCA or VCF pipelines, playbooks, workflows, or document templates — they are **read-only** to this project. The PH line gets its own pipeline, workflows, doc template, phone numbers, and campaign codes so the existing business keeps running untouched and the audit stays clean.

Naming note for the R&D plan page. The plan surface at `/admin/rnd` still shows these assets under the older draft label "**SETTER —**". The assets actually built in GHL use the final "**PH —**" prefix (e.g. the live pipeline is "**PH — Outbound Setters**"). When the plan says "SETTER 01 — Packet Send," the real workflow you create is "**PH 01 — Packet Send**." Same thing; final name wins.

The verified facts this runbook is built on

Fact	Value
------	-------

GHL location (MFunding.net)	t7NmVR4WCy927j4Zon4b
PH pipeline (already created)	PH — Outbound Setters · ZTSCCAEt9wFI6rfdPsLD
Handoff pipeline (do not modify)	MFunding MCA Pipeline · bG9ZEh4eP9x60E1CyaMx
Connect-bank custom field	PH Connect Bank URL · {{contact.ph_connect_bank_url}} · id 0Ulkd6rcVZ4ZrYTuPob4
Sending email address	sales@send.mfunding.net
Doc template to duplicate	04C MCA PARTIAL · 6a5594fa268297575c2770d5
Disclosure to append	Broker Compensation Disclosure · 6a40dda27ded2344b54ecbce

Why some steps are human-only. We confirmed empirically that GHL's API blocks the creation of **workflows, document/contract templates, and phone-number purchases** — those must be done by hand in the GHL web UI. That is why Steps 1–3 and 7 are click-by-click.

Compliance guardrail (every word you type). In PH copy, scripts, emails, and the doc template, an MCA is **never** a "loan." Use **funding, capital, working capital, or advance**. Scrub cell numbers for TCPA before dialing and honor DNC globally.

Step 1 — Buy 2 phone numbers

Who: Owner · **Time:** ~5 min · **Cost:** ~\$1.15–3/mo each + usage

Exact clicks:

1. In the MFunding.net sub-account: **Settings** → **Phone Numbers** → **Add Number**.
2. Search area code **954** (Broward). If nothing clean, fall back to **754**.
3. Buy **two** numbers.
4. Rename them **PH Setter 1** and **PH Setter 2**.
5. **Do NOT** add either to any ring group — dedicated outbound lines, off the corporate rotation.

Verify: Both numbers appear in Settings → Phone Numbers, labeled **PH Setter 1** / **PH Setter 2**, neither in a ring group.

Then hand to Claude: give Claude the two numbers to record in `platform_settings.ph_settings.setter_numbers` (SQL in Appendix A).

Unblocks: setters get working lines (Step 7); scorecard attributes dials to the right setter.

Step 2 — Create the two PH workflows

Who: Owner or Khalil · **Time:** ~10 min each

Workflows cannot be created via API — build them in the GHL UI. Both are **enrollment-only** with **NO trigger**. House rule (July 13): **a stage move must never auto-send documents**. The setter (or the packet edge function) enrolls a contact deliberately.

Build the **doc template in Step 3 first**, then attach it here — or create these shells now and attach the template once it exists.

2a. Workflow **PH 01 — Packet Send**

1. **Automation** → **Create Workflow** → **Start from scratch (blank)**.
2. Name it **PH 01 — Packet Send**.
3. Leave the trigger **empty** (enrollment-only).
4. **Action 1 — Send Documents & Contracts** → template **PH — Application + Disclosure (Combined)** (from Step 3).
5. **Action 2 — Send Email** → from `sales@send.mfunding.net`, paste the Appendix B copy **verbatim**. The **CONNECT YOUR BANK** button URL must be exactly `{{contact.ph_connect_bank_url}}`.
6. **Publish**.
7. Copy the **workflow ID** from the browser URL (after `/workflow/`). Give it to Claude for `ph_settings.packet_workflow_id`.

Verify: Published, no trigger, both actions present. Send a test enrollment and confirm the email arrives with a working CONNECT YOUR BANK button.

2b. Workflow **PH 02 — File Complete Notify**

1. **Automation** → **Create Workflow** → **blank**, name it **PH 02 — File Complete Notify**.
2. Trigger **empty** (enrollment-only).
3. **Action — Internal Notification** to owner + closer: "PH file complete — [contact] signed + bank connected. Ready for MCA pipeline handoff."
4. **Publish**, copy the workflow ID, give it to Claude for `ph_settings.notify_workflow_id`.

Verify: Published, no trigger, internal notification action present.

Unblocks: the packet edge function enrolls contacts into **PH 01** to send app + bank link; "Bank Connected" enrolls into **PH 02** so you're notified the instant a file is complete. Until the IDs are in `ph_settings`, the automated enrollment has nothing to call.

Step 3 — Build the combined document template

Who: Owner · **Time:** ~20–30 min

You need **one** e-sign document containing the application **and** the broker compensation disclosure, ending in a **single** signature block.

1. Go to the GHL document/contract templates.
2. **Duplicate 04C MCA PARTIAL** (`6a5594fa268297575c2770d5`). Never edit the original.
3. Rename the copy **PH — Application + Disclosure (Combined)**.
4. Open **Broker Compensation Disclosure** (`6a40dda27ded2344b54ecbce`) and **append its content as a new section** at the end of your combined doc.
5. Ensure exactly **ONE signature block**, at the very end (covers both app and disclosure).
6. **Save**, then **reload the page** and re-open the template to confirm it saved.

Doc-editor gotchas (these have bitten us before):

- **Fillable fields never pre-fill** — they are write-back only.
- **Type every merge tag manually** — autolink corrupts tags like `contact.business`, `contact.date`, `user.name`. Don't click the suggestion.
- **A broken variable silently blocks the save** — that's why you **reload after Save**. If edits are gone, a merge tag is malformed; fix and re-save.
- Keep wording **advance/funding**, never "loan."

Verify: After a reload, the template shows both sections, one signature block, and is selectable in the `PH 01` workflow's Send Documents action.

Unblocks: `PH 01 — Packet Send` has a template to send; setters close the application live.

Step 4 — Pick and buy the power dialer

Who: Owner · **Time:** 2 demos (book both this week)

Dialer	Pricing	Parallel	Notes
Hot Prospector	\$137–497/mo flat	3-line	Built for GHL, bring-your-own-Twilio
PowerDialer.ai	~\$45–199/user/mo	up to 5-line	Native GHL sync, PH-carrier-optimized

Demo checklist — verify on every demo:

- ☐ **Two-way GHL disposition sync?** Does a dialer outcome write back to the GHL contact/opportunity, and vice versa? (This feeds the scorecard.)
- ☐ **PH-agent call quality** — test with an **actual PH-based tester** on the call. Listen for latency/dropouts.
- ☐ **Parallel dialing** — confirm 3-line works cleanly; note the path to 5-line.
- ☐ **True cost** — per-seat **plus** Twilio usage; get the all-in monthly for 2 seats.

Decision gate: Pick one. Start with **power dialing + 3-line parallel**. Do **not** go predictive until 10+ agents.

Then hand to Claude: tell Claude which dialer you chose and whether it syncs dispositions, so the dialer→scorecard sync is built to match.

Unblocks: setters have a dialer; the scorecard wires to the real disposition feed.

Step 5 — Buy the list data

Who: Owner · **Time:** ~30 min · **Cost:** ~\$500–850/mo

- Order **UCC list data from Klover Data**. Apply the **\$100K+ originals** filter — it roughly doubles average deal size at no extra cost.
- (Optional) Layer **aged Synergy data** as extra dialing ammo.
- Run the file through a **TCPA cell-scrub service** before anything is dialed. DNC honored globally.

Then hand to Claude: give Claude the scrubbed file; Claude imports it into the **PH-UCC-2026-001** campaign (own code for clean audit separation).

Verify: import lands in `PH-UCC-2026-001` and records appear at the **New List Lead** stage of PH — Outbound Setters.

Unblocks: there is something to dial — the whole operation.

Step 6 — Hire the 2 PH setters

Who: Owner (Khalil for the tooling walkthrough) · **Time:** ~2 weeks elapsed (parallel to Steps 1–5)

6a. Post the job

Post on **OnlineJobs.ph**, **The Calling Agency**, and **Techmart**. Ready-to-paste JD in Appendix C.

6b. Screen and secure

Funnel: **voice sample** → **live roleplay on the objection scripts** → **paid 3-day trial on aged data** → **hire**. Use the objection bank (in the Revenue Playbook) for the roleplay.

Security rules (per the Access Control Policy): setters **never** touch bank credentials (Plaid is read-only, merchant-driven); **individual logins only**; **MFA required**; **offboarding = same-day revocation**.

6c. Comp plan (never pay per appointment booked)

Component	Amount
Base	\$550/mo
Per signed agreement	\$45
Per Plaid bank connected	\$75
Per fallback appointment shown	\$8
Per funded deal (override)	\$120

Strong performer ≈ **\$3,000–4,500/mo**. All-in for two ≈ **\$3,200–3,400/mo** (~\$10/hr equivalent). **Never pay per appointment *booked*** — it rewards junk. Pay on signed, connected, shown, and funded.

6d. Training week

Scripts + objection drills + tool walkthrough (dialer, GHL, packet send, Plaid explainer) + listen to the best real calls.

Unblocks: you have humans to run Step 7 and launch.

Step 7 — Provision each setter in GHL + assign numbers/seats

Who: Owner or Khalil · **Time:** ~10 min per setter

1. **Settings** → **My Staff** → **Add Employee** for each setter.
2. Give each a **limited role** — pipeline + conversations + dialer only; **no** settings, billing, or other pipelines. Individual login, **MFA on**.
3. Assign **PH Setter 1** number + a dialer seat to setter #1; **PH Setter 2** number + a seat to setter #2.
4. In the dialer, set the **call timeout to ~20 seconds** (lesson learned: longer timeouts waste dial capacity on no-answers).

Verify: each setter logs in, sees only the **PH — Outbound Setters** pipeline and their own number, and cannot reach settings or the MCA/VCF pipelines.

Unblocks: setters can dial. Launch.

Step 8 — Launch checklist and gates

Who: Owner · **Time:** Weeks 1–2 ramp, then ongoing

Launch checklist:

- ☐ Scripts drilled — opener, application close, Plaid pivot, resistance ladder, fallback ladder, objection bank.
- ☐ Daily scorecards posted in the group chat.
- ☐ **Announce every Signed and every Plaid connected** in the group chat the moment it happens.
- ☐ Heavy call review during weeks 1–2.

Daily per-setter targets:

Metric	Target
Dials	≥ 320 (320–350)
Live conversations	≥ 38 (12% contact)
Application attempts	≥ 22
Signed	≥ 2
Plaid connected	≥ 1.5
Fallback appointments	4–6

Weekly review ritual: per-setter Signed (10–14) and Plaid connected (8–11); funnel health (Signed→Plaid ≥ 70%, Plaid→submitted ≥ 90%); cost per signed ($\leq$ \$150) and cost per funded ($\leq$ \$600) by list source via Campaign Audit.

 **KILL CRITERION:** If you reach **20+ clean submissions with ZERO fundings** → **STOP** and diagnose the list/funder mix before spending more. You will have learned that for ~\$2,500 instead of ~\$25,000.

Scale gate: Add **setter #3 only after 45–60 days** of consistent per-setter targets **AND** first funded deals.

October milestone: 3–4 funded/mo — the exact bar Zach @ Greenbox set, and the Bitty reapplication window. When you hit it: **reapply to Bitty via Rosmery** and **call Zach @ Greenbox**.

Appendix A — the `ph_settings` SQL

`platform_settings.ph_settings` does **not exist yet**. After Steps 1 and 2, hand Claude the two workflow IDs and the two setter numbers; Claude runs this (or run it in the Supabase SQL editor):

```
insert into platform_settings (key, value, updated_at)
values (
  'ph_settings',
  jsonb_build_object(
    'packet_workflow_id', 'PASTE_PH_01_WORKFLOW_ID',
    'notify_workflow_id', 'PASTE_PH_02_WORKFLOW_ID',
    'setter_numbers',      jsonb_build_array('PH_SETTER_1_NUMBER', 'PH_SETTER_2_NUMBER')
  ),
  now()
)
on conflict (key) do update
  set value = platform_settings.value || excluded.value,
      updated_at = now();
```

The `||` merge lets you re-run it later to add or overwrite individual keys without wiping the others.

Appendix B — `PH 01` packet email copy

Paste **verbatim** into the Send Email action. From: `sales@send.mfunding.net`.

Subject: Two quick steps to finish your funding request

Hi `{{contact.first_name}}`,

Great talking with you. Two quick steps and we can pull your numbers and show you exact funding options:

1. Review + sign — the short agreement we just sent takes about 30 seconds.

2. Connect your bank — takes about 60 seconds. It's read-only through Plaid; **we never see your login or password**.

CONNECT YOUR BANK → ← button URL: `{{contact.ph_connect_bank_url}}`

Do both while we're on the phone and we'll keep everything moving today.

— The Momentum Funding team

Keep the language **funding/capital/advance** — never "loan." The button URL must be exactly `{{contact.ph_connect_bank_url}}` (type it, don't autolink).

Appendix C — Job description draft

Title: MCA Appointment-to-Application Setter (US Business Hours, Full-Time)

About the role: We're a US business-funding company (Momentum Funding). You'll call US small-business owners from a pre-scrubbed list, qualify them for working capital, and walk them through a short e-sign application and a 60-second read-only bank connection — live on the call. Results-driven outbound role with base + performance pay.

You must have: Fluent, clear spoken English · Prior US outbound sales / appointment-setting experience · Quiet home workspace · Stable internet (25 Mbps+) · Reliability during US business hours.

Nice to have: Power-dialer and CRM experience (GoHighLevel a plus); MCA or business-funding background.

Comp: Monthly base + per-signed-agreement + per-bank-connected + per-appointment-shown + per-funded override. Strong performers earn \$3,000–4,500/mo equivalent.

How to apply: Send a 60-second voice sample introducing yourself and describing a US outbound sales role you've held.

Handoff map — who does what

The machines are building (do not do by hand)	You do (this runbook)
PH — Outbound Setters pipeline + 9 stages	Buy 2 phone numbers (Step 1)
Per-stage automations (enrollment-only)	Create PH 01 / PH 02 workflows (Step 2)
<code>send-setter-packet</code> edge function (mints Plaid link → writes <code>ph_connect_bank_url</code> → enrolls in PH 01)	Build combined doc template (Step 3)
"Setter Operation" Revenue Playbook	Choose + buy dialer (Step 4)
Setter scorecard / daily dashboards	Buy + scrub list data (Step 5)
Campaign-audit KPIs + <code>PH-UCC-2026-001</code> code	Hire + train setters (Step 6)
<code>ph_settings</code> row write (once you hand over IDs)	Provision setters in GHL (Step 7)
—	Launch, run the gates (Step 8)

The single handoff point to the existing business is the **Bank Connected** stage — and only there. Everything upstream is the PH line's own, never entangled with the running MCA/VCF flow.
